## PREMIUM SHEETFED FOUNT

### PRODUCT DESCRIPTION

Win Fount SFAC is a corrosion inhibited fountain solution concentrate for use on sheetfed presses. In most cases a 6-8% addition of isopropyl alcohol will be sufficient in alcohol dampening systems. Win Fount SFAC has also excellent transfer properties in combination with UV-inks. Highly recommended when calcium deposit on ink rollers causes problems. Win Fount SFAC meets the demands as set by the leading European press manufacturers.

This product is suitable for water with hardness values of 4-20°dH (German scale). The recommended standard addition is 2% (vol/vol), resulting in a pH value of 4.9-5.2, depending on the hardness of the water. The recommended dosage can be varied between 1,5% and 3%, depending on the water quality. For every 1% of concentrate added the conductivity increase will be approximately 580 µS/cm.

### DIRECTIONS FOR USE

Before adding Win Fount SFAC, it is important to empty and clean the fountain solution circulation system first. Also the condition of the dampening system is important. Check whether the fountain solution dosing equipment is accurate and apply the right dosage. For precise control of the dosage, conductivity measurements are recommended. It is advisable to check the roller settings of the dampening system. When reducing or eliminating IPA a looser roller setting could be necessary.

### MAJOR POINTS

- Immediate high density copies by optimal ink transfer;
- Extreme stable ink/water balance;
- Prevents calcium deposit on ink rollers;
- Considerable reduction of ink- or paper piling on the blanket;
- Fully controlled water uptake by the ink;
- Faster and cleaner start-ups;
- Contains active plate preservers and maximum foam reduction;
- Meets the demands of important press manufacturers.

### PACKAGING

5, 20, 200 and 1000 liter cans/drums/containers.

## Bousfield

#### Manufactured by

Bousfield BV
