

Win

System SH

CONDITIONER FOR RO WATER

PRODUCT DESCRIPTION

Win System SH is an artificial water hardening additive, for use in conjunction with Reverse Osmosis (R.O.) or very soft water.

The purpose of this conditioner is to obtain consistently very high quality water. Conditioning R.O. water with Win System SH gives water the ideal characteristics for the offset printing process. This allows the printer to eliminate a very important inconsistency, namely fluctuations in water quality. This will lead in a quality improvement of the printing.

DIRECTIONS FOR USE

Applying 0.5% Win System SH to pure Reverse Osmosis water, results in 8°dH hardness. For every 0.5% added the conductivity increase will be approximately 275µS/cm.

MAJOR POINTS

- Conditions very soft water, eg. Reverse Osmosis water
- Added to R.O. water, this product gives a constant quality, low calcium and low chloride content
- Calcium free product

PACKAGING

5 and 20 litre cans

Bousfield

Manufactured by

Bousfield BV
