

Win

Fount SFAR3-C

SHEETFED ALCOHOL REDUCING FOUNT

Winfount SFAR3-C is an universal fountain solution concentrate for use on sheetfed, continuous stationary and web-offset presses. Winfount SFAR3-C is designed to reduce the amount of isopropyl alcohol or make the use of it entirely redundant. In most cases a 0-4% dosage of isopropyl alcohol will be sufficient for alcohol dampening systems. Winfount SFAR3-C meets the corrosion demands as set by the leading European press manufacturers.

A 3% dosage of Winfount SFAR3-C can replace up to 12% isopropyl alcohol. This product is suitable for water with hardness values of 4-16°dH (German scale). The recommended standard addition is 3% (vol/vol), resulting in a pH value of 4.8-5.3, depending on the hardness of the water. The recommended dosage can be varied between 2% (soft water) and 4% (hard water). For every 1% of concentrate added the conductivity increase will be approximately 490 µS/cm.

Characteristics:

- Immediate high density copies by optimal ink transfer;
- Extreme stable ink/water balance;
- No problems concerning calcium deposit on ink rollers and blankets;
- No ink feedback on the dampening rollers;
- Considerable reduction of ink- or paper piling on the blanket;
- Fully controlled water uptake by the ink;
- Faster and cleaner start-ups;
- Contains active plate preservers;
- Maximum foam reduction.

Application:

Before adding Winfount SFAR3-C, it's important to empty and clean the fountain solution circulation system first. Also the condition of the dampening system is important. Check whether the fountain solution dosing equipment is accurate and apply the right dosage. For a precise control of the dosage conductivity measurements are recommended. It's advisable to check the roller settings of the dampening system. When reducing or eliminating IPA a looser roller setting could be necessary.

PACKAGING

5, 20, 200 and 1000 litre cans/drums/containers

Bousfield

Manufactured by

Bousfield BV
P.O. Box 365, 4870 AJ Etten Leur
