ROLLER PROTECTOR

Roller Protector is especially designed for multi-colour offset presses and is used when some of the units of these presses are not used while the other unit(s) is/are printing a job. Roller Protector allows ink rollers, which are not covered with ink, to rotate (idle) without any troubles. It protects these rollers as Roller Protector acts like a lubricant. It overcomes excessive heat and so there is no mechanical friction resulting in a situation where ink rollers last much longer.

Roller Protector is based on these raw materials, which can be qualified as compatible with all mineral and vegetable oil offset inks. On top of that the product has the property to act like a rejuvenator and removes ink and gum glaze from the treated rollers.

Application:

Apply sufficient (approx. 10 to 20 ml.) Roller Protector to provide good coverage without causing the rollers to slip or to dry out. After the job has been completed and the unit concerned is needed for a regular printing job, it is recommended to scrape off the used Roller Protector. If there still is a remarkable amount of used Roller Protector on the rollers it is recommended to wash up these rollers with a regular inkroller wash.

Packaging:

250 and 500 ml liter bottles

Bousfield
